READ ME FIRST

Before you start

1. **Gather the bottles.**
   Collect every medicine your parent takes: prescriptions, inhalers, eye drops, creams, patches, vitamins and anything bought over the counter. Copy each one exactly as it appears on the pharmacy label.

2. **Fill in the lists.**
   Use the prescription list for anything a doctor ordered, and the second list for over-the-counter medicines and supplements. If something on a label isn't clear, ask the pharmacist.

3. **Use the chart day to day.**
   Write each medicine and time from the label into the daily chart. Whoever gives or checks a dose writes their initials. Print a fresh chart each week.

4. **Keep it current.**
   When anything is started, stopped or changed, note it in the changes log and update the list. Ask the pharmacist to review the list whenever a medication changes.

5. **Share it.**
   Keep the original in one known spot. Snap a photo for the family chat so every sibling sees the same, up-to-date list.

> **About this list**
> Use this list to record medications exactly as prescribed or recommended by your parent's doctor or pharmacist. It does not suggest doses, timing or combinations, and it does not check for drug interactions. Bring it to every appointment and ask the pharmacist to review it whenever a medication changes.
